Design references (open these links)

Reference	Link	What to take	What NOT to do
Excel Tissue – STRUCTURE	https://exceltissue.com/	Page flow of a B2B tissue brand: industry sections, product grid, client-logo strip, enquiry buttons on every page	Do not copy its text, photos, code or exact layout (copyright; duplicate content hurts Google; Excel Tissue is a possible supplier of ours)
Reel Paper – LOOK (primary)	https://www.reelpaper.com/	Clean, airy, joyful feel: white space, big product photos, bold short headlines, simple icons	No US-specific claims
Lucart Professional – BACKUP	https://www.lucartprofessional.com/en/	Product filtering and the business-buyer flow	—
WEPA – HERO BANNER	https://www.wepa.eu/en/	One calm full-width banner on a beige background; we use a bamboo / leaf mood image	Don't say 'bamboo products' – only 1 of 25 launch products is bamboo
Who Gives A Crap – FUN	https://au.whogivesacrap.org/	Playful micro-copy, illustrated pack patterns, a fun counter strip – sparingly	Don't make the whole site 'funky' – business buyers must feel safe

All 25 researched reference sites (10 India, 15 international) are listed with links in the Appendix.

Must-have features

- Track clicks in Google Analytics (event whatsapp_click with product ID).

- Submit → the brochure PDF downloads immediately (and a copy is e-mailed to the user if possible).
- Each lead is saved to a Google Sheet and e-mailed to info@dolluzcorp.com (columns: date, first name, last name, e-mail, mobile, page, language).
- Brochure file supplied by Dolluz; keep under 5 MB. Separate files later for Tamil and Hindi.

3. Languages – English default, Tamil and Hindi at launch

Language	When	Note
English	Launch – default	All pages
Tamil	Launch	Content from the product list and page-text sheet; Noto Sans Tamil

Telugu / Kannada	When we enter Andhra / Karnataka	Structure must allow adding them without redesign
Arabic	Only if we export to the Gulf	Needs right-to-left layout – not in phase 1

Build proper multi-language pages (e.g., WordPress + WPML / Polylang, or Next.js i18n) with a switcher top-right that remembers the choice. Do **not** use the free Google Translate widget. Banner headlines are HTML text (not baked into images) so they change with the language.
